

QASHQAI

e-POWER

The New Nissan Qashqai. Dare Beyond.

It's been 20 years since the Nissan Qashqai pioneered the crossover segment, back in 2006. The first of its kind that paved the way by blending the best of what a hatchback could offer, with SUV practicality.

The new Nissan Qashqai delivers on its pioneering legacy with electrifying progress. The Qashqai e-POWER uses a petrol engine and a lithium-ion battery to power an electric motor, giving you the benefits of an EV when you want them, and the peace of mind of petrol when you need it.

*E-POWER IS A UNIQUE NISSAN POWERTRAIN WITH AN ELECTRIC MOTOR-DRIVEN SYSTEM THAT DELIVERS THE DRIVING EXPERIENCE OF AN EV, WITHOUT THE NEED TO CHARGE THE BATTERY FROM AN EXTERNAL POWER SOURCE. E-POWER USES A SMALL PETROL ENGINE TO GENERATE ELECTRICITY FOR THE BATTERY, WHICH DRIVES AN ELECTRIC MOTOR THAT POWERS THE WHEELS.

A bold origin story. A striking new design.

With its sporty and more dynamic proportions, the new Qashqai is an icon redefined. Bolder, subtly sophisticated and resolutely striking. New signature headlights and a sharply cut grille add a powerful expression of modern Japanese craftsmanship.

12.3-Inch Wide Screen Infotainment Display

Hybrid re-invented.

100% Electric Drive feel. No charging required.

Nissan's e-POWER system includes a petrol engine, generator, inverter, battery, and electric motor. The electric motor delivers power directly to the wheels using energy stored in the battery pack. The petrol engine, which is used to charge the battery pack or power the electric motor, eliminates the need for an EV charger.

e-POWER shifter.

The Nissan e-POWER e-Shifter is an electronic, joystick-style gear selector that controls your electric driving modes. It is designed to look and function much like a computer mouse. Along with typical Park (P), Reverse (R), Neutral (N) and Drive (D), the e-Shifter offers an additional Regenerative Braking Mode (B-Mode).

Once you are in Drive (D), pull the lever backward one more time to engage B-Mode. This setting increases regenerative braking, capturing kinetic energy to charge the battery while slowing the vehicle down when you ease off the accelerator.

Three Drive Modes:
Eco, Normal and Sport

A quiet relaxing drive.

Powered by a battery pack, the e-POWER system is quieter and more fuel efficient than a traditional petrol-powered car. The system's petrol engine charges the battery pack at higher cruising speeds.

Powerful, smooth acceleration.

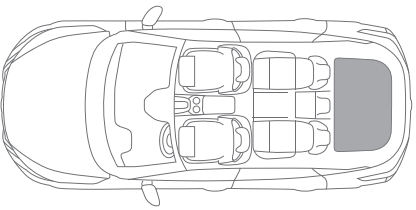

With precise electric motor control at fractions of a second, e-POWER delivers powerful and smooth acceleration when you need it. The electric motor's instant torque output and acceleration performance helps you stay ahead of traffic.

In high power demand situations, such as strong acceleration when entering a freeway, the petrol engine and generator are used to keep the battery pack charged and can directly power the electric motor.

Ultimate driving confidence and passenger safety.

Qashqai is equipped with advanced driver safety technologies, designed to keep you one step ahead of your surroundings, for maximum confidence and peace of mind.

Rear camera - see what's right behind you.

Right side camera - flick the switch to see the kerb.

All-around view - get a virtual 360° birds' eye view as you manoeuvre.

Front camera - get a combined front and overhead view for perfect parking.

From the 3D-Around View Monitor to the 360° virtual birds eye composite view, giving you the confidence to manoeuvre and park like a pro, every time.

Four front and rear parking distance sensors and Moving Object Detection alert the driver with audio and visual warnings if movement around your vehicle is detected.

Advanced Driver Safety Systems.

Nissan Qashqai is now equipped with 6 airbags and advanced safety technologies to monitor the road and help keep you and your passengers safe. These advanced safety features keep you informed of your surroundings, and may even intervene to prevent a potential incident.

INTELLIGENT EMERGENCY BRAKING
OR AUTOMATIC EMERGENCY
BRAKING (US ONLY)

Forward Emergency Braking (FEB)

FEB mitigates frontal collision by using radar sensors and front-facing cameras to monitor your proximity to the vehicle, cyclists, pedestrians or objects ahead.

REAR AUTOMATIC
BRAKING

Rear Emergency Braking (REB)

REB is a driver-assist system which mitigates rear-end collisions while reversing. It helps drivers detect stationary objects and obstacles located directly behind the vehicle in parking lots or driveways.

LANE DEPARTURE
WARNING

Lane Departure Warning (LDW)

LDW proactively detects if the vehicle unintentionally drifts out of its lane without an active turn signal. The system alerts the driver with an audible chime, a blinking indicator light, and steering wheel vibrations.

BLIND SPOT WARNING

Blind Spot Warning (BSW)

BSW uses rear bumper radar sensors to monitor your blind spots. If it detects a vehicle in your adjacent lane while you are driving it triggers a visual warning, and flashes with an audible chime if you use your turn signal.

REAR CROSS
TRAFFIC ALERT

Rear Cross Traffic Alert (RCTA)

RTCA assists the driver in avoiding collisions by warning the driver with an audible alert warning and flashes an indicator on the door mirror on the same side as the approaching vehicle.

Nissan's commitment to quality: To provide all customers with a consistently high level of quality, Nissan applies the same standards worldwide, to ensure that all Nissan owners enjoy peace of mind for the lives of their vehicles. The approach is based on quality from the customer's perspective on three key elements: First, the expectation of a smooth driving experience with complete peace of mind. Second, the intangible appeal of a vehicle, its power to captivate and excite, with features that capture attention and imagination. Third, the level of attentiveness and service during the sales process, and long after the sale is concluded.
